

The World's Most Advanced Teeth Whitening System

Smartbleach is the European-designed and built system that has revolutionised the way teeth-whitening is performed. With a patented interaction of pure-green light and a unique whitening gel Smartbleach can target stains other systems can't, with greater consistency, safety and comfort.

For more information on Smartbleach teeth whitening visit www.smartbleach.com.au or contact your Smartbleach clinic.

Keep Your Smile Bright Without Giving Up The Things You Enjoy...

Red wine, coffee, smoking and time can leave your teeth appearing dull and lifeless. With Smartbleach® you can keep doing the things you like and maintain a brighter, more confident smile.

Key Differences Of Smartbleach® Teeth Whitening

- Treats stains other systems can't budge
- Comfortable and fast with natural looking results
- Often there is no need for home maintenance trays to achieve the whitening result
- Non-acidic gel means no etching of the tooth enamel like traditional whitening gels
- No heating of the tooth pulp means less sensitivity and greater safety
- Virtually no dehydration of the enamel so results don't bounce back when you go home
- Photo-dynamic gel interacts with laser-like light to create a more effective whitening process

Smartbleach® Questions & Answers

What is the Smartbleach® treatment?

Smartbleach® is a photo-dynamic teeth whitening procedure that creates long-lasting teeth whitening in as little as forty-five minutes. The results are immediate and won't bounce back like home-bleaching and heat-lamp based treatment systems.

Why is Smartbleach® superior to other methods of teeth whitening?

The Smartbleach® treatment process is patented. Only Smartbleach can use the unique combination of pure green laser-like light and a scientifically-engineered alkaline gel. The alkaline gel does not etch tooth enamel like traditional acid-based bleaching gels and the laser-like light avoids heating of the tooth-pulp like heat-lamp based systems meaning less sensitivity post-treatment.

Can you show me the improvement I can expect?

Yes. We can show you on a shade chart and the expected degree of improvement.

How does Smartbleach® work?

The dentist applies patented Smartbleach® gel to your teeth. Targeted green laser-like light is then directed onto the gel. There is a specific interaction between the Smartbleach® 3LT light and the gel which whitens the teeth. This gel is exclusive to Smartbleach® and is the reason for the superior results.

Who does the treatment?

A Smartbleach® approved treatment clinician in a dental surgery. These experts have been specifically trained in the Smartbleach® teeth-whitening technique.

The Coolest Light-Based Teeth Whitening System

Long-Lasting Whitening Results

More Consistent & Predictable Results

Immediate Whitening That Won't Bounce Back

Is Smartbleach® safe?

Yes. Smartbleach® is backed by more than ten years of research in Australian and European universities.

How many treatments do I need?

A single treatment is all that is needed in the vast majority of patients. Certain heavily stained teeth may need more than one treatment but your Smartbleach treatment adviser will inform you of this prior to treatment.

How long does it take?

Less than one-hour in most cases.

How long does it last?

Assuming you look after your teeth normally, experience has shown that the benefits of Smartbleach® can last for years.

How do I know if Smartbleach® is suitable for me?

Simply arrange a cosmetic consultation with a Smartbleach® approved dental clinic. They will tell you if your teeth are suitable and show you the result you can expect. If you decide to proceed you can then schedule a convenient time for the treatment.
